

## Introduction

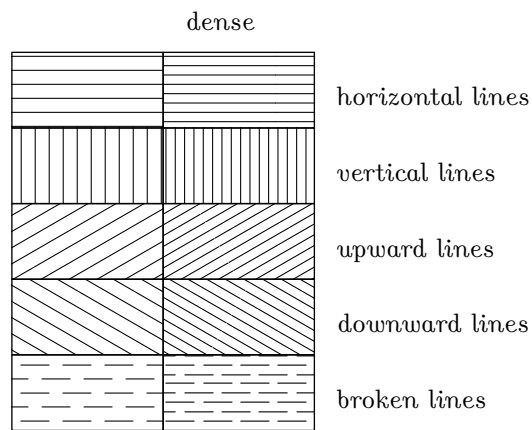

This is a small library of monochrome patterns for the `minim-mp` metapost processor. Load the patterns by saying

```
input minim-hatching;
```

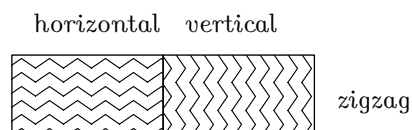

at the top of your metapost file or instance.

I recommend printing this file, as patterns do not always display well on a computer screen.

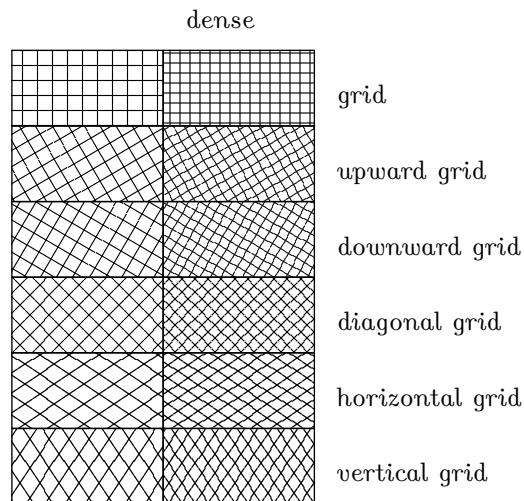

## Line patterns

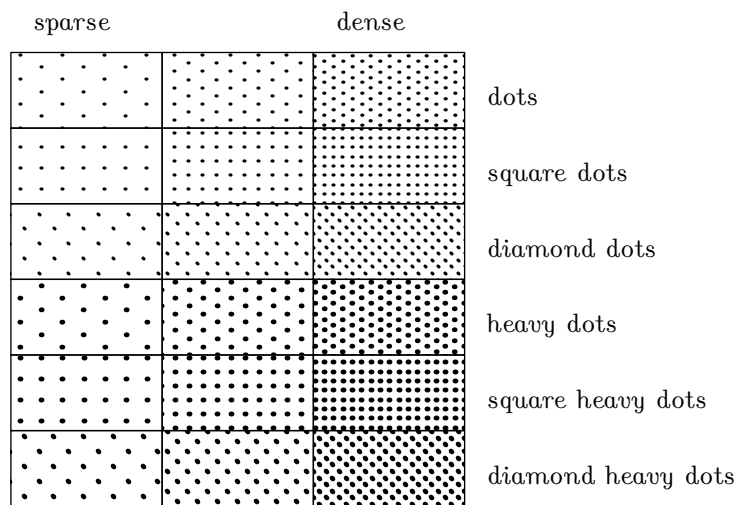

## Zigzag patterns

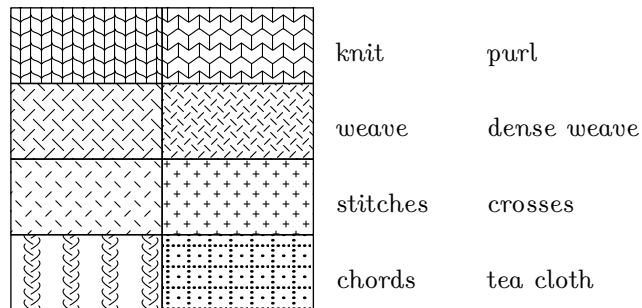

## Grid patterns

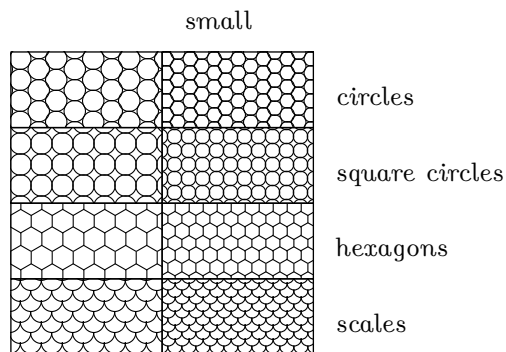

## Dot patterns

## Cloth patterns

## Circle patterns

## Stone patterns

## Licence

This package may be distributed under the terms of the European Union Public Licence (EURL) version 1.2 or later. An english version of this licence has been included as an attachment to this file; copies in other languages can be obtained at
